CONCLUSION

Prepared by: Mariya Mathew

Domain:cloud computing

Through this mini project on **AI Personal Study Assistant**, I learned how generative AI tools can be used to support students in learning and revision. I understood how to prepare study materials as a PDF, upload the document to Chatbase, and create a chatbot that answers questions based on the uploaded content. I also learned how to design and publish a website using a website builder and connect the chatbot to it.

An important part of this project was testing the chatbot with different questions and checking its answers against the study material. This helped me understand the importance of accuracy and verifying AI-generated responses. I also gained practical experience in using AI tools, organizing information, designing a website, and combining different tools into one useful learning platform.

Overall, this project improved my knowledge of generative AI and showed me how an AI-powered study assistant can make learning more interactive, accessible, and convenient. It also helped me develop practical digital skills that I can use in future academic projects.
